

ADRIAN GARCED

(321) - 246 - 3329 | AGADRIAN1331@GMAIL.COM | [GITHUB](#) | [CODEBERG](#)

EDUCATION

University of Central Florida | GPA: 3.8/4.0

Expected Graduation: May 2028

Bachelor's of Science , Computer Science

Relevant Coursework , OOP in Java

PROJECTS

[libpky](#)

2025-present

C++, Templates, Memory Management, OOP

- Implemented STL-style containers in modern C++, applying generic programming, RAII, EBCO, copy/move semantics, and iterators.
- Developed custom allocation and reallocation logic supporting copy/move construction and emplacement while maintaining exception safety, allowing clean rollback of state.
- **Reduced container memory overhead by up to 50%** through optimized object layout using the `[[no_unique_address]]` attribute.

[tort - Cross-Platform Shell](#)

2026

C, Linux, POSIX, Windows API, Systems Programming

- Developed a platform agnostic (Unix / Windows) shell in C, which supports process creation, command execution, and signal handling.
- Designed a reusable command parsing and memory management components with defensive error handling, preventing memory leaks and/or corruption.

[ezlog - Cross-Platform Logging Library](#)

2023-present

C/C++, System Calls, Library Design

- Developed a lightweight, cross-platform logging library compatible with both C and C++ with configurable log levels and formatted diagnostic output.
- Implemented platform-specific functionality through conditional compilation to support both Windows and Linux environments.
- Designed a reusable logging API with consistent error reporting with the goal of minimal integration overhead.

[pastebox - Minimal Paste Sharing Service](#)

2026

Typescript, SQLite, Node.js

- Built a lightweight paste sharing service with persistent SQL storage and automatically expiring content via a scheduled cron job.
- Designed REST endpoints for paste creation and retrieval with server-side expiration handling.

SKILLS

Languages: C/C++, Rust, Python, Typescript, Java

Web Frameworks: React, Next.js, Node.js, Hono

Systems: Linux (Arch, Fedora, Debian), Windows 10, 11

Databases: SQLite

Tools: Git, Docker, Vercel, Microsoft Office
