

Jesica Bermudes

(954) 297-6828 | Jesica.bermudes11@gmail.com | github.com/Cherriuu | cherriuu.github.io/my-portfolio

EDUCATION

University of Central Florida

Orlando, FL

Bachelor of Science in Computer Science

Expected Graduation: Spring 2027

- GPA: 3.4/4.0
- Relevant Coursework: Data Structures and Algorithms I & II, Object-Oriented Programming, System Software, Operating Systems, Machine Learning, Cybersecurity, Discrete Mathematics, Matrix and Linear Algebra, Calculus I-III, Statistics

TECHNICAL SKILLS

Programming Languages: Java, Python, C, JavaScript, SQL, HTML, CSS

Frameworks & Technologies: React, Node.js, Flask, Django, JavaFX

Developer Tools: Git, AWS, Jupyter Notebook, PyCharm

Libraries & Concepts: pandas, Data Structures, Algorithms, Object-Oriented Programming, Operating Systems, Machine Learning, Cybersecurity

CERTIFICATIONS

AWS Certified Cloud Practitioner

PROJECTS

Thyroid Tracker | *Django, Python, SQL*

2026

- Built a Django web app for individuals managing thyroid conditions to track symptoms, medications, and lab results, including TSH and T3 levels, over time
- Modeled symptoms, medications, and lab results as separate entities tied to a user's condition, each with its own views and forms
- Implemented user authentication and ownership checks to keep each user's health data private and secure
- Added PDF export functionality so users can generate a summary of their symptom history to share with their doctor

Knowledge Garden | *Django, Python, SQL*

2026

- Built a Django web app for organizing personal notes into topics, with entries logged under each one over time
- Linked entries to their parent topic using a foreign key relationship, keeping notes organized by subject
- Implemented user authentication so each user's topics and entries remain private
- Added ownership checks to prevent users from accessing content that isn't theirs

Pathfinding Visualizer | *Java, JavaFX, Data Structures & Algorithms*

2026

- Developed an interactive pathfinding visualizer to demonstrate graph traversal and shortest-path algorithms on dynamic grid layouts
- Implemented Breadth-First Search (BFS), Depth-First Search (DFS), and Dijkstra's Algorithm with real-time path visualization
- Utilized queues, priority queues, and graph traversal logic to optimize algorithm execution and path generation
- Built an interactive JavaFX interface allowing users to place obstacles, generate mazes, select algorithms, and compare algorithm behavior

BubbleFlow – Boba Shop Inventory API | *Flask, Python*

2026

- Built a Flask REST API to manage and track boba shop inventory levels, including tea and boba stock
- Designed a conversion system that calculates estimated servings from raw batch volume and bag counts, applying a safety buffer to prevent overstating available inventory
- Structured the API with Flask-CORS to support integration with a frontend client

EXPERIENCE

Jade Tea House

Orlando, FL

Shift Lead

Aug. 2022 – Dec. 2024

- Collaborated with team members in a fast-paced environment to maintain efficient daily operations and customer service
- Worked effectively under pressure during high-volume hours while coordinating tasks across multiple employees
- Assisted in developing and improving menu drinks by testing recipes and gathering customer feedback
- Trained and mentored new employees on workflow procedures, communication, and drink preparation standards
- Demonstrated strong problem-solving and adaptability skills while handling changing customer demands and team responsibilities
