EDUCATION

University of Central Florida **May 2028**
B.S., Computer Science *Orlando, FL*
• **Coursework:** Programming Languages, Object-Oriented Software Development, Security in Computing

SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, Luau, C, HTML/CSS
Frameworks & Libraries: React, React Native, Next.js, Node.js, Flask, FastAPI, Tailwind CSS, WebSockets
AI & Data: Claude API, TensorFlow Lite, YOLOv8, OpenCV, ChromaDB, PostgreSQL, SQLite
Cloud & Tools: AWS (S3, CloudFront), Docker, Vercel, Git, CI/CD

EXPERIENCE

PETE Learning **May 2026 - July 2026**
Software Engineering Intern *Orlando, FL*
• Built and shipped a meeting-intelligence pipeline on the Claude API that automated CRM recaps for 20–30 weekly meetings, saving 20+ hours of manual recap work per week.
• Developed JavaScript REST and GraphQL integrations linking meeting transcripts to HubSpot deals, routing each transcript through role-specific prompts to produce structured recaps.
• Stored recaps alongside source transcripts in HubSpot to keep downstream AI workflows grounded in original meeting context; adopted by the full sales team, including the CEO.

Kiru Games **January 2023 - Present**
Founder & Lead Programmer *Orlando, FL*
• Led programming, production, and a five-person team for a Roblox experience sustaining 10M monthly active users for over a year, with 8,000 peak concurrent players and $40K+ in revenue.
• Implemented buffer-based client-server networking in Luau with Zap, replacing RemoteEvents to cut replication overhead and hold playable frame rates on low-end devices during large enemy waves.
• Built the wave-spawning, enemy AI, and in-game shop systems driving core combat and monetization.

PROJECTS

greghouse greghouse
• C++, JavaScript, ESP32, Arduino, React, Node.js, WebSockets, AWS Lambda, DynamoDB, API Gateway
• Awarded 3rd Best Overall out of 86 projects submitted for the BloomKnights 2026 Hackathon.
• Instrumented ESP32 firmware in C++ posting soil reads every 2s, cutting POST latency 85% via keep-alive TLS.
• Orchestrated an AWS API Gateway, Lambda, and DynamoDB pipeline ingesting 1,800 cached readings/hr.
• Streamed avatar and chat over Node.js WebSockets, replacing full map sync with one deterministic world seed.

Recall Recall
• Python, C++, TypeScript, ESP32, YOLOv8, SQLite, ChromaDB, Next.js, Gemini, ElevenLabs
• Awarded 2nd Best Overall out of 85 projects submitted for the HackUSF 2026 Hackathon.
• Deployed a YOLOv8 and Gemini 2.5 Flash vision pipeline, achieving 95% accurate scene descriptions.
• Designed a dual-ESP32 camera + mic wearable in C++, streaming MJPEG and 16kHz PCM over WiFi.
• Stored AI memories in SQLite and ChromaDB with vector embeddings for natural-language retrieval.

Tide Sense Tide Sense
• Python, TypeScript, FastAPI, React Native, TensorFlow Lite, YOLOv8, SQLite, Gemini, ElevenLabs
• Built an AI/CV powered riptide detection mobile app with React Native/Expo to improve the safety of beachgoers.
• Deployed the trained model via TensorFlow Lite, achieving an 85% detection consistency across 100+ live scans.
• Trained a custom YOLOv8 riptide detection network on 2,200+ annotated Roboflow images.
• Built FastAPI/SQLite backend logging scan histories by risk level with confidence tracking and 7-day trend charts.

Tessfarms.com Tessfarms.com
• Next.js, TypeScript, Turso, Drizzle ORM, Dexie.js, Vercel
• Shipped a solo-built point-of-sale platform for a plant nursery, supporting 120+ customers and $20K+ in sales.
• Implemented offline-first mutation queues with Dexie.js/IndexedDB, batch-syncing writes on reconnect.
• Modeled invoicing, inventory, and delivery in Turso/Drizzle ORM, served by Next.js Server Components.
• Automated overdue-delivery flags via Vercel Cron, covering core workflows with Vitest and Playwright.
